SUMMARY

Self-taught and motivated software developer with a solid foundation in programming, honed through various hands-on projects and independent learning. Demonstrated ability to quickly adapt and excel in various technology environments.

SKILLS

Languages: Python, C, C++, Pandas, matplotlib, HTML, JS, Node.js, React, Haskell, MMIX

Technologies: Git, Github, Linux, AWS, Google Colab, Jupiter Notebook, OOP, pygame, expo, Heroku, SQL, csv

PROJECTS

Python — **Wildfire data analysis** — **https://github.com/hyowon2jjang/CxC-hackathon**
Participated in CxC data science hackathon, by using google colab, Jupiter Notebook, Analysed about 22k of data about wildfire with pandas, matplotlib. Created AI model about wildfire by trying various algorithms.

Python, Pygame — **Rubik's cube helper** — **github.com/hyoseo837/Rubik-Cube-Helper**
Developed a software that helps solving Rubik's cube.Used OOP to implement the virtual Rubik's cube, designed/created UI of the program

FullStack — **project Dchup** — **https://github.com/hyoseo837/Dchup**
Planned, designed, structured, created frontend and backend of app that can be deployed on web. Used AWS PSQL RDS server and EC2 server, with node.js to implement backend of the app, Used react to implement frontend of the app

C++, SFML — **Gravitational motion simulator** — **github.com/hyoseo837/Learning-Cpp**
created a simulation of orbital motions of planets and stars based on real physics formula with C++. visualized on the window using SFML library.

C++ — **Fractal image Generator** — **github.com/hyoseo837/Learning-Cpp**
Developed a program that generates Newton's fractal in .bmp file format, and measure dimension of the fractal with C++. Wrote an essay about the dimension of fractal using generated images.

React — **Web based Solitaire game** — **github.com/hyoseo837/ddanzt**
Developed a Solitaire game on web with React. Created functional components represents each card using hooks to manage complex condition statements. Deployed via GitHub pages

JavaScript — **ORBT browser extension game** — **github.com/hyoseo837/chrome-extension**
Developed, published the chrome extension in vanilla JavaScript with canvas. Programmed planet's motion and collision by using OOP techniques

EDUCATION

8/2023 - Now — **University of Waterloo** — **University**
Candidate for Bachelor of CS, Computer Science, Honours, Co-operative Program

EXPERIENCE

12/2022 – 3/2023 **AFTER-SCHOOL TUTOR** — **American School of Warsaw**
- Created and filled a table to record lessons, weak points, and questions of each classes, to understand student's academic performance effectively, by communicating with the student.

12/2022 – 3/2023 **Ukrainian Refugee center volunteer** — **Global Expo Centrum Refugee Center**
- Supported engaging, fun, and smooth-running events by participating in stage setting, preparing snacks and balloons, to achieve everything planned before.

12/2022 – 3/2023 **Programming for Service club leader** — **American School of Warsaw**
- Used solid interpersonal communication skills to efficiently run project with 6 collaborators.
- created GitHub repository and shared with collaborators and managed the project workflow.
- reviewed the code and accepted pull request without conflict.

LANGUAGES

English - Fluent, **Korean** - native
